

Restriction on the use of certain dangerous substances in accordance with EU Directive 2011/65/EU and 2015/863/EU

The materials we use comply with the current guidelines of the 2011/65/EU directive as well as the extension 2015/863/EU of the European parliament for restriction of the use of certain hazardous substances in electrical and electronic devices (RoHS directive) and fulfil the legal regulations governing the placing on the market of substances.

We can confirm that in respect of the named RoHS directive, all products supplied by KAISER comply with the requirements of the following percentages by mass and/or that no such substances are released during the fitting and installation of our products:

Lead (0.1%)
Mercury (0.1%)
Cadmium (0.01%)
Hexavalent chromium (0.1%)
Polybrominated biphenyls (PBB) (0.1%)
Polybrominated diphenylethers (PBDE) (0.1%)
Diethyl hexyl phthalate (DEHP) (0.1%)
Benzylbutylphthalat (BBP) (0,1 %)
Dibutyl phthalate (DBP) (0.01%)
Di-isobutyl phthalate (DIBP) (0.1%)

One exception relates to our lead-containing one-gang junction box for radiation protection (Art. No. 9074-03). The lead, which it contains, is required in order to ensure the increased level of radiation protection against radiation used for medical purposes in lead-lined walls in spite of fitted installations. However, please note that, with professional and expert processing in accordance with our specifications and instructions, the lead function component does not endanger health because no contact with the skin is possible.

Please contact us if you require any further information, and we will be happy to help you.

With best regards,
KAISER GmbH & Co. KG
